

E-Learning Module on Environment Friendly Industrialization

E-Learning Course Title: Environment Friendly Industrialization

Registration Fee (including GST):- **Rs. 1416/- (including GST)**

About eLearning Program: - Environment friendly Industrialization is the order of the day. It focusses on protection of environment and economic growth. Industrialization is the must for economic growth of the country as well as for creating employment opportunity for the youths. However, pollution is an important factor to consider and to minimize for presenting the present world to the future generation. Environment friendly atmosphere is a broad term which deals with process industries, engineering industries, Office buildings, transport industry, hospitality industry, medical services etc.

Environment friendly is a significant and continuous improvement in both business and environmental performance. The industries of all kinds viz private-sector manufacturing, state-owned enterprise, the service sector as well as transport sector. It emphasises to adopt new technology for reducing pollution, solid & liquid waste and recycling of resources for production. Usage of renewable energy ensures clean energy and substantial reduction in emission level.

Register to learn:

- Environment friendly industrialisation
- Renewable energy
- Elimination of the usage of toxic substances in process
- Reduction of liquid and solid waste
