

Virtual Webinar: Productivity Improvement through Kaizen (Continuous Improvement) & It's Applications

Fee: Rs.99/-

About Webinar: Lean is a systematic, continuous improvement approach that concentrates on creating more value for customers by eliminating activities that are considered waste, i.e. any activity or process that consumes resources and adds cost or time without creating value for the customers. Lean applies to the entire organization including supply chain and can provide the foundation for widespread organizational improvement. To “think lean” is to switch from an internal to an external focus. After becoming accepted in the manufacturing industry, lean is increasingly being applied across other sectors from healthcare, retail stores, and banks to offices, call centers, hospitals, and government departments.

With a clarion call for “*Atma-Nirbhar Bharat*” given by our Honorable Prime Minister, it has become imperative on various sectors of the economy to rise up to the occasion and deliver quality products, at least cost, in quick time while ensuring safety and well being of its employees. ‘Lean Principles’ when applied to various systems and processes would provide us all those benefits and provide us the pedestal to reach greater heights as a country.

With this thought process, National Productivity Council, has come up with a transformational webinar on, “Productivity Improvement through KAIZEN & It’s Applications”, designed to familiarize the audience with the philosophy of lean thinking, the application of its various tools and techniques and the lean way of life for overall Productivity Enhancement.

Webinar Coverage: -This webinar would cover

- Kaizen definition & Process
- Examples of Kaizen
- Kaizen Implementation Process

- Benefits of Kaizen
- Examples of Kaizen
