ESG Expert and Consultant
Growlity Inc. (USA and India)

Dates: 1st to 3rd September 2021 (3 Days); Timings: 2:00 pm to 5:00 pm

About Training Course: -

Responsible investing and ‘environmental, social and governance’ (ESG) is a global trend that has started to gain momentum in India. Unlike in the developed world, ESG investment is still at a nascent stage in the Indian market. Despite the increased ESG-focused conversations

and growing interest of various stakeholders towards responsible investing, there are quite a lot of challenges that hinder its overall progress and wide adoption in the developing market like India

Training Course Coverage: -

Environmental, social and governance (ESG) issues are of importance for businesses globally as the legal and regulatory landscape changes and ESG expectations of investors, customers, employees and other stakeholders grow. Now more than ever, investors are incorporating ESG criteria into their investment assessments and valuation decisions, and perceive companies with strong sustainability programs one of the indicators of sound and reliable performance going forward.

In the developed world, both individual as well as institutional investors are very active as far as ESG and responsible investments are concerned. In order to satisfy the demands from investors, asset management companies are frequently factoring in new products.

The awareness among investors, moreover, has been created by the media, regulatory bodies and various institutions. However, if the same level of awareness has to be created in India, then asset management companies will have to take the lead.

There is a lack of clarity and understanding among investors and other stakeholders about the ESG terminologies in India.

There is inconsistency in the ESG ratings due to the differences in data collection, analysis and rating methodology by ESG rating agencies. The lack of reliable and standardised metrics to adequately measure the ESG factors results in discrepancies in comparability of different firms.

The quality of ESG information needs to be adequate and to the point to avoid information overload and big data problem. The role of ESG in investment markets is a big concern due to the inadequate disclosures and lack of availability of data.

Climate change and sustainability rightly dominates the current ESG focus. In particular, the financial sector is taking proactive steps to engage financial institutions in preparing and implementing strategies for supporting low-carbon economy and providing sustainable finance. Financial institutions providing project finance are placing greater emphasis on substantive implementation of applicable sustainability frameworks including IFC Performance Standards and the Equator Principles. Greater attention is paid to the rights of indigenous peoples and human rights in general, and governance structures are gaining in prominence; sponsors are responding with more detailed identification and mitigation of environmental and social impacts throughout the lifetime of their projects.

Speaker and Company Profile:-

Growlity, Inc. is United States of America (USA) based Management Consulting firm providing Virtual Consulting Services Worldwide to enable businesses to achieve Growth with Sustainability..!!!
